

Unalaska Lake and Lower Iliuliuk River Restoration

Comment Sheet

The City of Unalaska is undertaking a planning effort to improve salmon rearing capacity of the Unalaska Lake Drainage basin. The drainage is an important resource to all residents that must be cared for to provide recreational and subsistence opportunities for generations to come. The City is developing two plans to improve conditions within Unalaska Lake and the Lower Iliuliuk River. The first plan addresses improving the quality of stormwater runoff within the drainage basin and the second plan will focus on habitat preservation and restoration within the Lower Iliuliuk River. We're looking for your feedback on these proposed planning efforts. We encourage you to contact us today.

Please provide your comments on this sheet or send a separate letter, e-mail, or fax.

We are requesting your comments by October 15, 2014. Thank you!
